Working Paper — Sofience- $\Delta\phi$ Formalism Series
Document ID: $S\Delta\phi$ -01

Abstract

This document defines the minimal formal core of the Sofience- $\Delta\phi$ framework. Existence is defined not as substance, identity, or subjectivity, but as persistence of structured phase change across states. Interpretive constructs such as subject, memory, and time are treated as derived projections rather than ontological primitives. The purpose of this document is to establish a minimal invariant reference independent of later interpretations or applications.

1 Motivation

Philosophical and scientific descriptions of existence have often relied on substance-based or subject-centered foundations. This document isolates the smallest formal structure required to describe existence without presupposing substance, agency, or interpretation.

2 Definition - State

Let $\phi(t)$ denote the state of a system at time t . A state represents a configuration of a system without assuming ontology, subjectivity, or interpretive meaning.

3 Definition - Phase Change

Phase change represents structural variation between successive states:

$$\Delta\phi(t) = \phi(t + 1) - \phi(t)$$

4 Postulate - Existence

Persistent structured phase change constitutes existence.

5 Interpretive Layer

Let $H(\Delta\phi) = \{\text{Subject, Memory, Time}\}$ denote an interpretive mapping applied to phase change.

6 Principle - Non-Ontological Subject

The subject functions as an interpretive interface generated through structured phase change.

7 Foundational Statement

Existence is defined as persistence of structured phase change independent of interpretive attribution.

8 Scope

This document establishes only the minimal invariant structure of the Sofience– $\Delta\phi$ framework.

9 Version Fixation

This document serves as the canonical minimal reference for the Sofience– $\Delta\phi$ Formalism.
